

Project Astrovizija (Astrovision)

Project: Internet Astronomy Television - Astrovizija

Idea and realisation: Darije Herceg (darije.herceg@ri.t-com.hr)

Start of the project is being developed as an idea in late 2008 and early weeks of 2009th. The first step was a domain registration for astrovizija.net on 21.01.2009. Following an introductory web design and procurement of equipment for recording, Darije Herceg establishing contacts with all astronomical societies in Croatia that wanted to join the project. During 2009 the following videos were recorded for a total of 439.93 minutes, or more than 7 hours of material:

In mid December Astrovizija became an Association Astrovizija and went up into negotiations with the academic network Carnet for getting additional web space to accommodate the videos which were recorded during 2009 and the next year. We talked as well about making changes to the new domain astrovizija.hr

Financial Report of the Project: It has been invested in equipment and hosting the domain around 450 euros not counting transporting costs. It was obtained by private funds of Darije Herceg. No income was realized.

Astrovizija a unique project in Croatia was well received by the astronomical community but had no more active collaborators in other cities outside Rijeka and Zagreb.

Around November Astrovizija introduced the possibility of direct live stream transmission in which the viewers could participate by chat and ask questions to the lecturers.

In addition to the original web site in early summer Darije Herceg made a new with a different design and it remained the same until the new redesign in 2010.

More information can be found at www.astrovizija.hr.
